

How to present a Research Paper

CSE 300: Technical Writing & Presentation

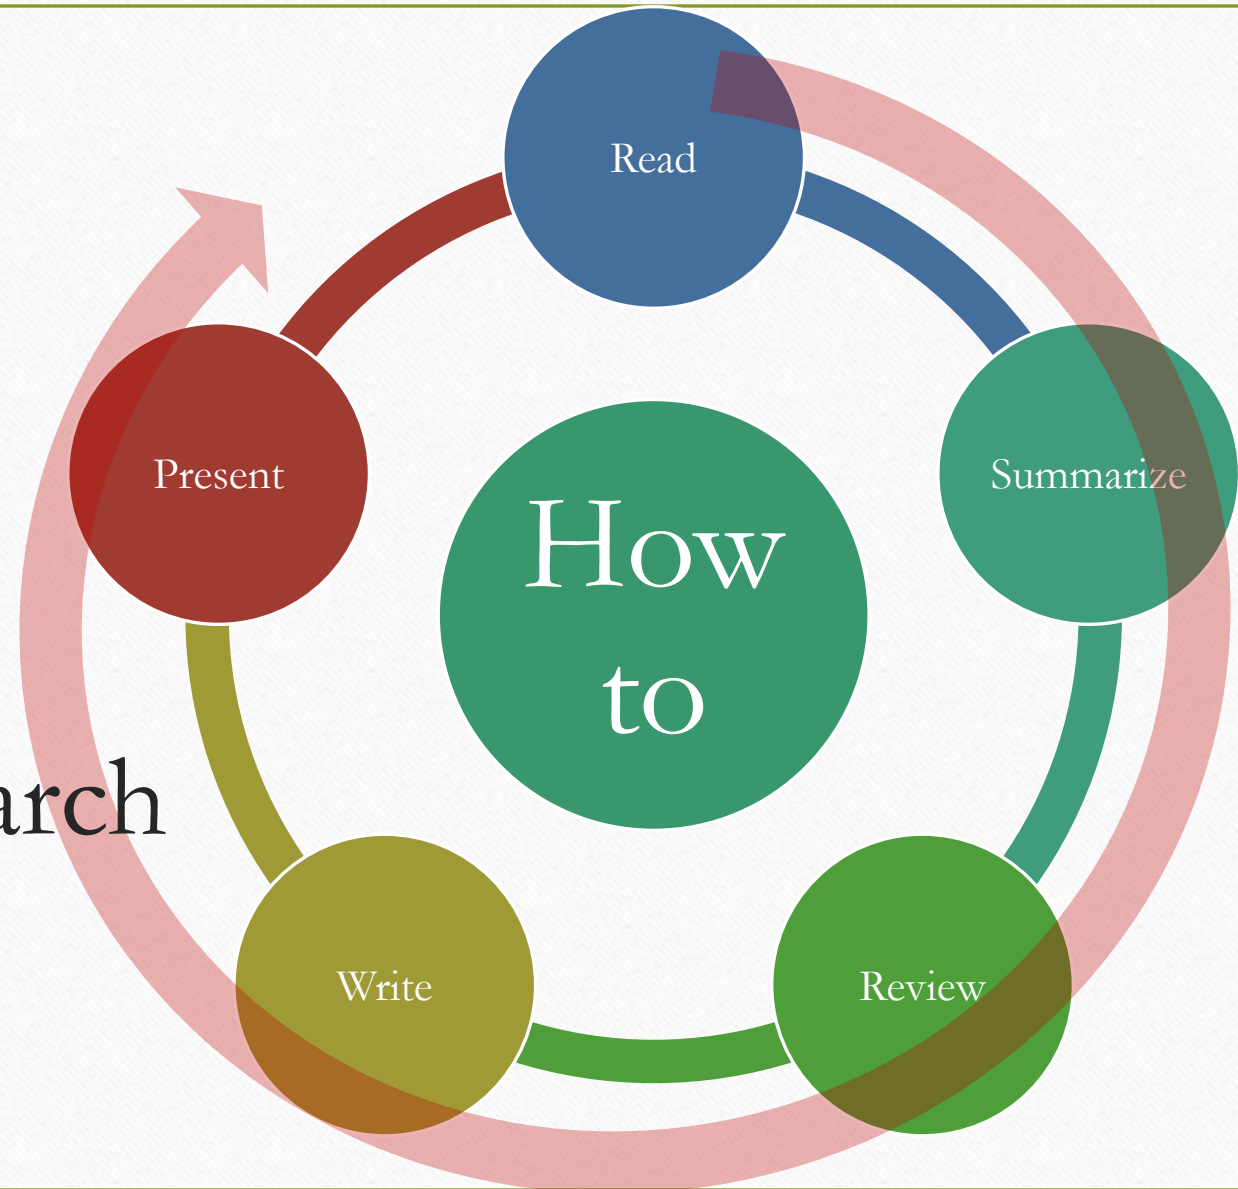

How to ___ a Research
Paper?

How to a Research
Paper?

WHY

WHOM

HOW

WHY

Give the audience a sense of your idea / work

Make them want to read your paper

Feedback: To engage, excite, provoke them

- Impress the audience

- Tell them all you know about a subject

- Present every little detail of your work

WHY

Invest time

Learn skills

Practice

The greatest ideas
are worthless if you
keep them to you

Good papers and
talks are a
fundamental part of
research excellence

Write a paper, and
give a talk, about
any idea

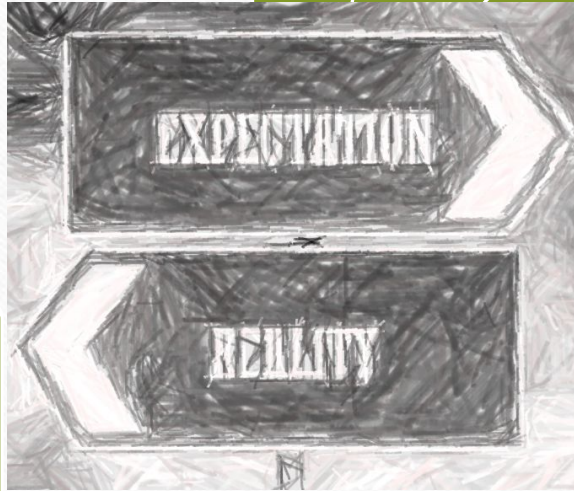

WHOM

Have never heard of
you

Have heard of your
jargons, but wish they
hadn't

Have just had lunch and
are ready for a doze

Have read all your earlier papers

Thoroughly understand all your
notions and jargons

Are all agog to hear about the latest
developments in your work

Are fresh, alert, and ready for action

WAKE
THEM UP

Make them
glad, they did

WHOM

More seriously....

Who
would
be
there?

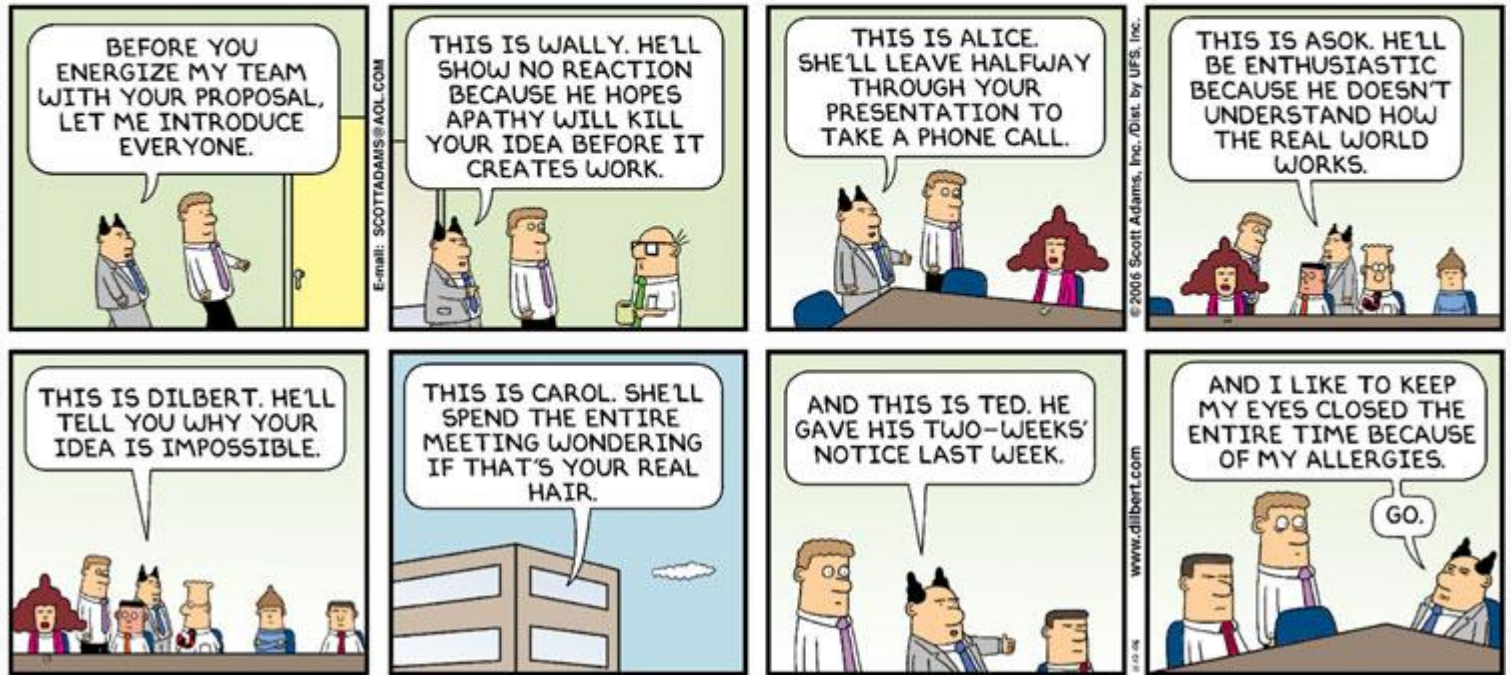

Scientists expert in
your field

MIX

Scientists not
expert in your field

Students

Non experts

WHOM

More seriously....

Who
would
be
there?

Scientists expert in
your field

MIX

Scientists not
expert in your field

Students

Non experts

Remember: They might be tired

They can read ☺

They are thinking “Why should I listen?”

Non-experts will tune off within 2
minutes

Experts after 5 minutes

What
to
put
in

1. Motivation (20%)

2. Key Idea (80%)

3. There is no #3

Motivation:
Your Key
Idea

If the audience
remembers only one
thing from your talk,
what should it be?

Don't leave your
audience to
figure it out for
themselves.

Identify

Be
Specific

Organize

Ruthlessly prune
material that is
irrelevant to this goal.

Early motivation

- At the beginning, motivate your audience (use easy examples)

Spoil the Punch line

- State your results early and in simple terms

Visuals

- Illustrate your idea with images and diagrams

Leave them with these thoughts...

I understood what the problem was and why it was important

I have an idea of what her solution was and how it was different/better than others

She knows the literature (i.e. quoted my work 😊) and we might collaborate on this aspect of her research

Your Main Weapon

EXAMPLES

Even when time is short,
do not omit the examples

Use
Examples
to

motivate the work

convey the basic intuition

illustrate the key Idea

show extreme cases

highlight shortcomings

What to Leave Out

- conveys near zero information at the start
- may put up an outline for orientation after your motivation
- signposts at pause points

Outline
of your
talk

Related
Work

- You absolutely must know the related work;
- respond readily to questions
- Acknowledge co-authors (title slide), and
- pre-cursors (as you go along)
- Do not disparage the opposition, rather write: X's very interesting work does Y; I have extended it to Z

Apologies

Technical
Details

- "I didn't have time to prepare this talk properly"
- "I don't have time to tell you about this"
- "I don't feel qualified to address this audience"

- will send your audience to sleep
- Present specific aspects only
- refer to the paper for the details
- Have backup slides

What to Leave Out

Outline of my talk

- Background
- The FLUGOL system
- Shortcomings of FLUGOL
- Overview of synthetic epimorphisms
- π -reducible decidability of the pseudo-carried fragment under the Snezkowski invariant in FLUGOL
- Benchmark results
- Related work

- conveys near zero information at the start
- may put up an outline for orientation after your motivation
- signposts at pause points

- conveys near zero information at the start
- may put up an outline for orientation after your motivation
- signposts at pause points

- "I didn't prepare this"
- "I don't know about this"
- "I don't feel qualified to address this audience"

- You absolutely must know the related work

Outline of your talk

- refer to the paper for the details
- Have backup slides

What to Leave Out

Related work

- [PMW83] The seminal paper
- [SPZ88] First use of epimorphisms
- [PN93] Application of epimorphisms to wibblification
- [BXX98] Lacks full abstraction
- [XXB99] Only runs on Sparc, no integration with GUI

Related Work

- You absolutely must know the related work;
- respond readily to questions
- Acknowledge co-authors (title slide), and
- pre-cursors (as you go along)
- Do not disparage the opposition, rather write: X's very interesting work does Y; I have extended it to Z

What to Leave Out

- CONVEYS MORE ZERO information at this
- away for you
- sign point

- "I didn't have time to prepare this talk properly"
- "I don't have time to tell you about this"
- "I don't feel qualified to address this audience"

Apologies

- "I didn't have time to prepare this talk properly"
- "I don't have time to tell you about this"
- "I don't feel qualified to address this audience"

• You also need to know the related work:

• title
• title
• title
• title
• title
• title

• title
• title
• title
• title
• title
• title

• details
• Have backup slides

What to Leave Out

Technical Details

will send your audience to sleep

- Present specific aspects only
- refer to the paper for the details
- Have backup slides

Actual Presentation

- Your talk absolutely must be fresh in your mind

Prepare/polish the night before

- If you do not seem excited by your idea, why should the audience be?

Be Enthusiastic

- Point at the screen
- Make eye contact;
- identify a nodder, and speak to him or her

Being seen and heard

Actual Presentation

- Q's are not a problem
- Rather, opportunity to connect with your audience
- Specifically encourage questions during your talk
- pause briefly now and then, ask for question
- Be prepared to truncate your talk if you run out of time. Better to connect

Questions

Actual Presentation

- Inability to breathe
- Inability to stand up (legs give way)
- Inability to operate brain

The Jelly
Effect

- Script your first few sentences precisely
 - (= > no brain required)
- Move around a lot, use large gestures, wave your arms
- Go to the loo first

How to
Cope Up?
